# Отчет по лабораторной работе

«АРМ + Решение задачи коммивояжёра и его визуализация»

Выполнили: студенты группы ИВТ-23-2Б Чудинов Данил Николаевич Меновщиков Глеб Николаевич Соловьева Екатерина Александровна

Проверила: доцент кафедры ИТАС О.А. Полякова

# АВТОМАТИЗИРОВАННОЕ РАБОЧЕЕ МЕСТО ОФИЦИАНТА

#### Илея:

Работа официанта требует много внимания для каждого посетителя. В свою очередь каждому посетителю хочется знать когда его заказ готов и каков итоговый чек. Наш проект объединил решения этих проблем.

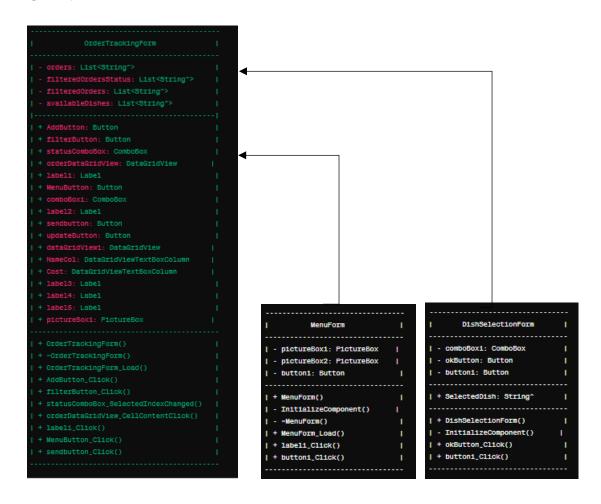

### ПО:

Для выполнение творческой работы выбран Windows Forms, видео снято с помощью стандартной функции записи экрана windows.

#### Классы:

- 1. OrderTrackingForm форма где происходит взаимодействие клиента с интерфейсом программы.
- 2. MenuForm форма которая демонстрирует меню
- 3. DishSelectionForm форма демонстрирующая список доступных блюд и позволяет выбрать одно из них.
- 4. Base для реализации базы данных
- 5. ClassName вспомогательно для базы данных
- 6. ManageForm форма для работы с программой со стороны персонала.

### UML:

### Программный код

# Main.cpp

```
#include "OrderTrackingForm.h"
using namespace Project1;
int main()
{
    Application::EnableVisualStyles();
    Application::SetCompatibleTextRenderingDefault(false);
    OrderTrackingForm^ form = gcnew OrderTrackingForm();
    Application::Run(form);
    return 0;
}
```

# ClassNames.cpp

```
#pragma once

## АЛГОРИТМ РЕШЕНИЯ ЗАДАЧИ КОММИВОЕЖОРА

Для данной лабораторной работы нужен был метод ветвей и границ.

### Алгоритм решения:

- 1. Составление матрицы смежности;
- 2. Нахождение минимума по строкам;
- 3. Редукция строк;
- 4. Нахождение минимума по столбцам;
- 5. Редукция столбцов;
- 6. Нахождение оценок для нулевых элементов;
- 7. Редукция матрицы;
- 8. Выбор: Если мы еще не нашли все отрезки пути, которые позволяют вернуться Коммивояжеру в исходный город, то возвращаемся к шагу

Если все отрезки пути найдены или оставшаяся часть очевидна — переходим к заключительному шагу — соединение путей. В реалиях данной задачи необходимо перейти к шагу 2.;

- 9. Построение маршрута;
- 10. Вычисление длины пути.
